Technical Skills:

- Languages: Javascript, NodeJS
- FrameWorks: React, Angular, Backbone, Express
- Database and ORM's: MongoDB, MySql, Mongoose, Sequelize, PostgreSQL, Knex, Bookshelf
- Deployment: Heroku, Digital Ocean, Heroku, AWS

Software Engineering Applications

Thesis Placeholder
Project tagline Project Link
- Bullet 1
- Bullet 2
- Bullet 3

Via·Tor
Project Link: legacyworldturtles.herokuapp.com
- Built an options menu to filter cards based on preference.
- Utilized React and Material-UI to pass state through checkboxes to toggle cards.
- Managed React state to pass down location data to multiple card views.

Laugh Local.ly
Project Link: laughlocallly.herokuapp.com
- Enabled comedians to manage their events.
- Combined React and Bootstrap libraries to update the view when managing events.
- Utilized React's state to update live in the view and passed along to database.

Codr
Codr teaches kids how to code javascript basics. **Project Link**: codrfy.com
- Utilized AWS to store high res images and shorten links to store in MongoDB.
- Enhanced Codr's visual appeal and integrated these components with server-side logic.
- Integrated AWS, React, and Mongoose to render images when a level is loaded from cookies.

Experience

Cinematic Artist, Telltale INC.   2011-2017
- Created cinematics and in-game cut-scenes for player created choices.
- Manipulated characters and cameras to give the user an emotional experience.
-

Education

- *Hack Reactor*, Advanced Software Engineering Immersive Program   2017
- *SAE Ex'pression College,* B.A.S in Animation and Visual Effects   2007-2010

Personal

I've been in remission from leukemia for 10 years. I dove into digital arts and transitioned into tech. I want to be able to contribute to projects that will bring people joy and happiness like so many projects did for me in the hospital.
